declined on average by 38.23 scale score points. The difference of 48.89 scale score points was statistically significant ($p=.026$). In addition, researchers analyzed fifth grade students separately, as they comprised 49% of the total users of the software. Fifth graders were divided into quartiles according to their usage of the software, the relationship between improvement in TAKS scores and usage of the software became evident. (See figure below)

Change in TAKS Scale Score Pts. '05-'06
